## DISCLAIMER

By using saorX-Token or soarX Projects like MisoarX, Ucodemy or Brain Elixir, you accept the risks associated with the crypto, transactions, and private keys. You accept the following and any other risks related to the saorX-Token:

- Cryptocurrencies are high-risk investments and highly volatile. Cryptocurrency may become even worthless. From the time of purchasing saorX-Token till the time you get the cryptocurrency delivered to your wallet, the saorX-Token value can be higher or lower than at the time of purchase. You are aware of these risks, and agree that the soarX foundation is not committed to repurchasing saorX-Tokens from you.
- Before you invest, make your research. If you have concerns please ask your financial advisor.
- We do not guarantee or warrant, and accept no legal liability direct or indirect, consequential, compensatory, incidental, actual, exemplary, punitive or special (including but not limited to lost capital, profits, loss of revenue or third-party loss foreseeable or otherwise, trading losses or damages, data, use, goodwill or other intangible losses) as the result of its ecosystem activities arising from or connected to the accuracy, reliability, currency, or completeness of any material in this whitepaper notwithstanding any negligence, default or lack of care, is disclaimed.
- Cryptocurrency transaction is irreversible. If you make a mistake sending saorX-Token to the wrong address or using the wrong network deposit address, your funds will be lost.
- If you lose your private keys we can't help you to recover your funds. You are aware of the risks associated with private keys. You agree that if you lose your private keys the funds will be lost.

## ABSTRACT

Cryptocurrency trading on centralized exchanges has been shown to be vulnerable to cybersecurity hacking and internal frauds over the years, with the most infamous hacks being Mt. Gox and Coincheck. In addition, trading on centralized exchanges is not compatible with DeFi applications since it is technically infeasible to bridge between decentralized applications and centralized servers without compromising the trust model. Regardless, DeFi applications need access to good liquidity sources which is a critical component to provide good services. Currently, decentralized liquidity consists of various sources including (JustSwap, BNB Trade), decentralized funds and other financial apps. The more scattered the sources, the harder it becomes for anyone to either find the best rate for their trade or to even find enough liquidity for their needs. saorX-Token is a fully on-chain liquidity protocol that can be implemented on any smart contract enabled blockchain. saorX-Token's solution allows liquidity to be aggregated from diverse sources into a single network, which in turn provides a single endpoint for takers to seamlessly perform multiple token trades in a single blockchain transaction. End users, DApps or any other party only need to query this single endpoint to get the best available rate for their trade.

The protocol allows for a wide range of implementation possibilities for liquidity providers, allowing a wide range of entities to contribute liquidity, including end users, decentralized exchanges and other decentralized protocols. On the taker side, end users, cryptocurrency wallets, and smart contracts are able to perform instant and trustless token trades at the best rates available amongst the sources. The on-chain instant exchange property is critical for enabling a wide range of decentralized use cases, including financial protocols and cryptocurrency payments. One would expect different implementations of saorX-Token protocol on other public blockchains to make on-chain instant exchanges to be available for various use cases and applications on these blockchains. saorX-Token is a decentralised synthetic asset contract protocol built on BEP-20. The contract is devised in such a way that everything is controlled by the contract itself autonomously. It follows a specific protocol and returns output based on the same. There are functions that are defined for the user and these functions control the major part of the contract. Functions like buy, sell, withdraw etc can directly be accessed by the user and anyone can call the total BNB function to check the liquidity of the exchange. This creates a direct entry point for the user and it is very helpful in creating an environment that has no one to control or no owner to change things as they are.

## INTRODUCTION

soarX Token is a purely decentralized token offered by misoarX community development program. It is offered for all type of services providing to the growing world of digital artists, content creators, collectors, e-commerce, digital news services, OTT platform, and gamers. soarX Token is ornamented by various Apps designed for real world requirement. As it is centered with various different kind of Decentralized projects, it will defiantly define itself as one of its kind in decentralized world. Through, its uniquely exchange and add-on services, it will surely reduce middleman commission and increase revenue to members associates with projects. The advancement in the blockchain technology and Smart Contracts have increased the possibilities that one can achieve through Crypto currencies. Entire world is gradually adopting blockchain. Soon or Later, Blockchain will only be the distributed ledger management system and crypto Token access code.

The rapid growing use of blockchain and smart contract based application, within upcoming two decades, there will be a huge demand of decentralized application in every industry regardless of small or large industries. To meet the future requirement, soarX Development team is consistently working on delivering such product. Only required, soarX Token to execute the Application that gives a high liquidity pool and consistency in Token burning. As development team is highly associate with development, it won't be a big hurdle to deliver such projects. There is a huge potential of implementation of soarX Token that will give high profit to stack holder of soarX Token. Not only that, soarX development team has uniquely designed add up liquidity and consistent burning schedule that will give a high growth. distributed ledger management system and crypto Token access code.

## LOCK & RELEASE SYSTEM

Founders token locks for 3 years after 3 years only 5% will release on monthly basis. Company will not sell any tokens on exchange, only staking program holders can sell on exchanges. Company can sell 2% tokens on yearly basis after global launch.

## BINANCE SMART CHAIN

(BSC), launched by crypto exchange Binance, is an Ethereum Virtual Machine (EVM)-compatible blockchain built to support smart contracts and staking in parallel to the previously launched main chain, Binance Chain. Binance Smart Chain is focused on making DeFi affordable by offering a higher gas blocklimit and faster block times than Ethereum. Its design is based on the Ethereum Gethclient and a copy of the EVM, allowing projects from the Ethereum ecosystem to function natively within BSC. BSC allows users to build dapps and stake on Binance Smart Chain while still making fast asset trades on Binance Chain; Binance Chain remains fast because it does not need its own smart contract functionality. The Binance Smart Chain mainnet launched in September of 2020. As of July 2021, Binance Smart Chain processes as many as 9 million transactions daily. Binance Smart Chain is connected to Binance Chain by two relayers. The BSC Relayer passes communications from Binance Chain to Binance Smart Chain (such as token transfers, refunds, or staking transactions). The Oracle Relayer monitors events on Binance Smart Chain and broadcasts the transactions to Binance Chain. This two-way connection enables cross-chain transfers and connects the two networks' ledgers into one interoperable system. the BSC ecosystem has a large and growing community of DeFi and NFT builders due in part to its low transaction fees and high transaction speeds, along with developer activity surrounding infrastructure, tooling, cross-chain bridges, API development, security projects, and a range of builder funding initiatives related to the Accelerator Fund. Blockchains such as Ethereum and BNB are constantly and continually growing as blocks are being added to the chain, which significantly adds to the security of the ledger. There have been many attempts to create digital money in the past, but they have always failed. The prevailing issue is trust. If someone creates a new currency called the X dollar, how can we trust that they won't give themselves a million X dollars, or steal your X dollars for themselves? Bitcoin was designed to solve this problem by using a specific type of database called a blockchain. Most normal databases, such as an SQL database, have someone in charge that can change the entries (e.g. giving themselves a million X dollars). Blockchain is different because nobody is in charge; it's run by the people who use it. What's more, bitcoins can't be faked, hacked or double spent – so people that own this money can trust that it has some value. The basis of the blockchain is its Cryptography. The verifiability of the blockchain is due to the cryptographic hash functions and their ability to morph any size of data into a fixed byte size of hash. This process cannot be reversed and the data once lost in the hashing process cannot be recovered. This makes it suitable for transparency and data sharing without any loss of privacy and data. Blockchain uses the asymmetric cryptography method to create hashes. Why asymmetric encryption? Because the data is to be shared publicly on all the nodes.

## BINANCE SMART CHAIN

### INDEPENDENT BLOCKCHAIN

While it runs in parallel with BC, Binance Smart Chain is a stand alone blockchain. This means that even if BC stops operating, BSC will continue to run its technical and business functions.

### VALIDATOR QUORUM

A validator quorum is required to secure the BSC network. The blockchain has 21 validators that are elected by BNB stakers every 24 hours. Anyone can be a candidate for election as a validator, but only those who belong to the top 21 highest-staked nodes will be chosen for the next validator set.

### BINANCE COIN

BNB is the Binance ecosystem's native utility token, which can be used both for BSC and BC. BNB is mainly used to pay for transaction fees on the BC and Binance DEX platform, staking and asset transfers. BNB can also be used to run smart contracts on BSC. For those who want to participate in network security or earn additional BNB rewards, BNB can be staked on a smart contract. And should users wish to, they can delegate their stake to a BSC validator of their choice and earn proportional rewards. Further more, validators have the power to decide how much of the BNB they collected from gas fees gets to be redistributed to their delegators.

### ABOUT SOARX

soarX is a decentralized, low-cost and privacy-protected platform. soarX aka soarX is a BEP-20 Token based on binance smart chain is committed to launching multiple projects in its community and ecosystem under the umbrella of MisoarX. With the focus on building three primary functions as part of its phase one deployment, MisoarX's mission is to simplify the transaction process between people around the world by offering an alternative for transaction without including the expensive middlemen.

## WHY SOARX?

### TRANSPARENCY & INTRANSIGENCE

Each time a token exchange is recorded on the binance blockchain via the platform, an audit trail is created to track the source of the tokens. This not only assists in enhancing security and preventing fraud in exchange-related enterprises, but also in establishing the validity of traded assets

### REDUCED FEES

The fees for soarX transactions are significantly lower than those for debit and credit cards, as well as wire transfers.

### TRACEABILITY OF TRANSACTIONS

Because each new transaction is encrypted and linked to the previous one, soarX is significantly more secure than other record-keeping systems. soarX is a complex string of mathematical numbers that cannot be altered. Centaurify's immutable and incorruptible nature protects it from faked data and hacks once constructed.

### CONVENIENCE OF USE

The ease of usage is what gives soarX its value. All you need is a smart device and an internet connection to become an investor quickly.

### TRUST

soarX is critical in the bitcoin business. This entails complete transparency in all aspects of community support and development, as well as any security effort. Examples include high-quality audits of the Binance Smart Chain's token code and the burning of liquidity tokens to significantly limit the danger of harmful activity.

### LONGEVITY

soarX is here to stay. The decentralised community is promoting the ecosystem's long-term development, which will result in real-world applications, increased incentives, and popularity.

## BENEFITS OF SOARX?

### GLOBAL PRESENCE

Global presence in all our current and potential markets is an essential element of our business strategy.

### SECURE INVESTMENT

Undoubtedly, Investment in soarX will be beneficial to you for long time secure future.

### RELIABILITY

Not only reliable but trustworthy also as we based on decentralized modal.

### SUPER SECURITY

Replacing the centralized modal with decentralized one making soarX one of the secure and safest platform to work with.

## ROADMAP

**MARCH 2022**

Release Website

**JULY 2022**

Release BEP-20 token on BSC network.

**JULY 2022**

Release Whitepaper

**JULY 2022**

Launchpad Panckae swipe

**JULY 2022**

Buy/sale open

**NOVEMBER 2022**

Listing in indian Exchanger Arthbit

soarX Token

## ROADMAP

**JANUARY 2023**

listing in  
international exchanger

**FEBRUARY 2023**

listing in one more exchanger

**JUNE 2023**

OTT Launch

**JULY 2023**

1st phase token burning

**DECEMBER 2023**

2nd phase token burning

**JUNE 2024**

Decentralised Gaming Platform

soarX Token

## ROADMAP

**DECEMBER 2024**

3rd phase token burning

**JUNE 2025**

Decentralised Gaming Platform

**DECEMBER 2025**

final token burning

**JUNE 2026**

Decentralised Gaming Platform

**DECEMBER 2026**

NFT Launching

**DECEMBER 2027**

Metaverse Launch

soarX Token

## TOKENOMICS

### TOKEN NAME

soarX

soarX Token

### TOKEN PLATFORM

BSC

### TOKEN SYMBOL

soarX

### TOTAL SUPPLY

1 Billion

soarX Token

## TOKEN DISTRIBUTION

### TOTAL SUPPLY - 1 BILLION

## PRICE PREDICTION

15/11/22 to 31/03/22	0.00083\$
01/04/23 to 31/03/24	0.0016\$
01/04/24 to 31/03/25	0.011\$
01/04/25 to 31/03/26	0.088\$
01/04/26 to 28/02/27	0.704\$
01/03/27 to 31/12/27	1.4\$

## USABILITY PROJECTS

## UTILITY SECTORS

A utility token offers a specific utility within a decentralized application. For example, the token may grant token holders the right to use the Utilities.

### EDUCATION

Learn Crypto is a free education platform

### RECHARGE

Use soarX Token or crypto on Mobile Recharge

### HEALTH

Crypto currencies are connected with health

### ENTERTAINMENT

Entertainment crypto currencies seek to reward users

### TRAVEL

Use soarX Token and crypto on Travelling

### RETAIL

Any time soarX Token can use for retail

### REAL ESTATE

Blockchain is poised to give the real estate

### TECHNOLOGY

Crypto are digital that use blockchain technology

### BANKING

Banking is a newer concept, describes how people interact with cryptocurrency

### ADVERTISEMENT

Digital advertisement is key for all businesses

## GLOBAL EVENTS

**DECEMBER 2022**

National Seminar

**FEBRUARY 2023**

International Seminar

**JULY 2023**

National Seminar

**DECEMBER 2023**

International Seminar
